

# THE SMD CODE BOOK

## SMD Codes.

SMD devices are, by their very nature, too small to carry conventional semiconductor type numbers. Instead, a somewhat arbitrary coding system has grown up, where the device package carries a simple two- or three-character ID code.

Identifying the manufacturers' type number of an SMD device from the package code can be a difficult task, involving combing through many different databooks.

This HTML book is designed to provide an easy means of device identification. It lists well over 3,400 device codes in alphabetical order, together with type numbers, device characteristics or equivalents and pinout information.

### How to use the SMD Codebook

To identify a particular SMD device, first identify the package style and note the ID code printed on the device. Now look up the code in the alphanumeric listing which forms the main part of this book by clicking on the first character shown in the left-menu.

Unfortunately, each device code is not necessarily unique. For example a device coded **1A** might be either a **BC846A** or a **FMMT3904**. Even the same manufacturer may use the same code for different devices!

If there is more than one entry, use the package style to differentiate between devices with the same ID code.

This compilation has been collected from R P Blackwell G4PMK, manufacturers' data and other sources of SMD device ID codes, pinout and leaded device equivalent information.

The entries under the Manufacturer column are not intended to be comprehensive; rather they are intended to provide help on locating sources of more detailed information if you require it.

## ID Code Variations

Many manufacturers use an extra letter as their own identification code. If the device is from Philips it will sometimes have a lower case 'p' (or sometimes 't') added to the code; Siemens devices usually have a lower case 's'.

For example, if the code is **1A**, according to the table there are a number of possibilities:

- 1A BC846A Phi ITT N BC546A
- 1A FM3T3904 Zet N 2N3904
- 1A MMBT3904 Mot N 2N3904
- 1A IRLML2402 IR F n-ch mosfet 20V 0.9A

**This has been a problem in the past, however recently manufacturers have been adding lower case letters which clarify the code.**

Many recent Motorola devices have a small superscript letter after the device code, such as **SA<sup>C</sup>**. (This smaller letter is merely a month of manufacture code.)

Many devices from Rohm Semiconductors which start with **G** have direct equivalents found in the rest of the number. For example **GD1** is the same as **D1** which is a BCW31.

Some devices have a single coloured letter (usually on extremely small diode packages). Colour, if significant, is shown in small type after the code letter.

An 'L' suffix usually indicates a low-profile package, such as an SOT323 or SC70.

SOT323.

SC70.

Reverse joggle devices do present a few problems. They often have an 'R' in the type number. A reverse package is one where the lead have been bent up instead of down. So it's a mirror image of a conventional device. Identification is usually possible from the code number, but some manufacturers use the same code. In these cases, it's a case of looking at the device with a magnifying glass. The leads of most normal packages come out closer to the circuit board side of the device; conversely a reverse joggle package will have them coming out closer to the 'top' of the device.

Sometimes a series of devices, derived from the same die, have related type (not code) numbers. Often an 'R' will indicate a reverse joggle package, and/or a 'W' indicate a smaller package variant, such as SOT343.

Sometimes similarities are also found in the code numbers. For example:

Recently some manufacturers have used a symbol or lower case letter to indicate the country of manufacture. These have been ignored in the alphabetical ordering. For example:

- '67' is the code for a BFP67 (SOT143 package) ,
- '67R' is the code for the reverse joggle variant BFP67R (SOT143R),
- 'W67' is the code for a SOT343 package version.

SOT143.

'Z-S' and 'ZtS ' are both 2PC4081Q devices made by Philips; the first made in Hong Kong and the second in Malaysia; this appears in the codebook classified under **ZS**.

#### Leaded equivalent device and information

Where possible, the listing gives the part number of a conventional wire-leaded device with equivalent characteristics. If the leaded device is well-known then no more information is given. If the device is less common, some additional information will sometimes be given. Where no exact leaded equivalent exists, a brief device description is given, which may be sufficient to allow substitution with another device.

When describing device characteristics, some terms are implied from the type of device. For example, a voltage specified for a rectifier diode is usually the maximum PIV (peak inverse voltage) of the diode, but for a zener diode the operating (zener voltage) will be given.

Normally, where a voltage, current or power is specified, these will be limiting values. For example, a device specified as NPN 20V 0.1A 1W is a NPN transistor with a  $V_{ce}$  (max) of 20V, maximum collector current of 100mA and a maximum total power dissipation of 1W. Some of the transistors are types with integrated resistors; in the list, a base resistor means a resistor connected in series with the base. When two resistor values are given, the first is the series base resistor, and the second the resistor between base and emitter.

#### Digital Transistors (dtr)

These are transistors with built-in resistors.

Some have one resistor between base and emitter, others in series with the base. Many others have both.

To keep things simple, the series resistor is called R1 and the base emitter resistor is called R2. If both are present, then two values are given, R1 first. So 4k7 + 10k means that R1 (the base resistor) is 4k7 and R2 (the resistor between base and emitter) is 10k.

#### Conclusion

Identifying the manufacturers' type number of an SMD device from the package code can be a difficult task, involving combing through many different databooks. This HTML book is designed to provide an easy means of device identification.

## Abbreviations

amp	amplifier
atten	attenuator
a	anode
b	base
c	cathode
ca	common anode
cc	common cathode
comp	complement
d	drain
dg	dual gate
Dtr	digital transistor (see codebook introduction)
enh	enhancement (mode - FETs)
fet	field effect transistor
fT	transition frequency
GaAsfet	Gallium Arsenide field effect transistor
g	gate
gnd	ground
gp	general purpose
hfe	small signal current gain
i/p	input
Id	drain current
Ig	gate current
Ir	reverse leakage current (diodes)
jfet	junction field effect transistor
MAG	maximum available gain
max	maximum
min	minimum
Mmic	microwave minature integrated circuit
Modamp	modular amplifier - an mmic amplifier
mosfet	metal oxide insulated gate fet
n-ch	n-channel fet (any type)
npn	npn bipolar transistor
o/p	output
p-ch	p-channel fet (any type)
pin	pin diode
pkg	package
pnP	pnP bipolar transistor
prot	protection, protected (as in mosfet gate)
res	resistor
s	source
ser	series
Si	silicon
substr	substrate
sw	switch or switching
Vce	collector - emitter voltage (maximum)
Vcc	collector supply voltage

### Manufacturer abbreviations

Agi	Agilent (was HP)
Fch	Fairchild
HP	Hewlett-Packard (Now Agilent)
Inf	Infineon (was Siemens)
ITT	ITT Semiconductors
MC	Mini-Circuits
Mot	Motorola (now ON Semiconductors)
Nat	National Semiconductor
Nec	NEC
NJRC	New Japan Radio Co
ON	ON Semiconductors (was Motorola)
Phi	Philips
Roh	Rohm
SGS	SGS-Thompson

Sie  
Sil  
Tem  
Tfk  
Tok  
Zet

Siemens (now Infineon)  
Siliconix (Vishay-Siliconix)  
Temic Semiconductors  
Telefunken (Vishay-Telefunken)  
Toko Inc.  
Zetex

### PACKAGE EQUIVALENTS

Here is a table of more-or-less equivalents for many SMD packages.

Package	Equivalent
SOT89	SC62
SOT223	SC73
SOT323	SC70
SOT346	SC59
SOT363	SC88
SOT416	SC75 SC90
SOT457	SC74
SOD323	SC76

**SOT- 23**

**SC- 59**

**SOT- 323/SC-70**

**SOT- 416/SC- 90**

### SMD Ceramic Capacitor Coding

SMD ceramic capacitors are sometimes marked with a code, consisting of one or two letters and a digit. The first letter if present is a manufacturer code (i.e K for Kemet, etc.), the second letter the mantissa and the digit the exponent (multiplier) of the capacitance in pF. For example **S3** is a 4.7nF ( $4.7 \times 10^3$  pF) capacitor from an unknown manufacturer, while **KA2** is a 100 pF ( $1.0 \times 10^2$  pF) capacitor from Kemet. *Thanks to K7ITM for providing this information!*

Letter	Mantissa	Letter	Mantissa	Letter	Mantissa	Letter	Mantissa
A	1.0	J	2.2	S	4.7	a	2.5
B	1.1	K	2.4	T	5.1	b	3.5
C	1.2	L	2.7	U	5.6	d	4.0
D	1.3	M	3.0	V	6.2	e	4.5
E	1.5	N	3.3	W	6.8	f	5.0
F	1.6	P	3.6	X	7.5	m	6.0
G	1.8	Q	3.9	Y	8.2	n	7.0
H	2.0	R	4.3	Z	9.1	t	8.0
						y	9.0

### SMD Electrolytic Capacitor Coding

SMD electrolytic capacitors are often marked with their capacitance and working voltage, e.g. **10 6V** is 10  $\mu\text{F}$  6V. Sometimes a code is used instead, which normally consists of a letter and 3 digits. The letter indicates the working voltage and the 3 digits (2 digits and multiplier) give the capacitance in pF.

Letter	Voltage
e	2.5
G	4
J	6.3
A	10
C	16
D	20
E	25
V	35
H	50

The band or stripe indicates the positive terminal.

For example, a capacitor marked **A475** is a 4.7  $\mu\text{F}$  10V unit.

$$475 = 47 \times 10^5 \text{ pF} = 4.7 \times 10^6 \text{ pF} = 4.7 \mu\text{F}$$

### SMD Resistor Coding

SMD Resistors are usually coded with a numerical equivalent of the familiar three band colour code. In the same way as wire ended components, precision resistors (1% or better) may be marked with a four digit code.

The first two (or 3) digits are the first two (or 3) digits of the resistance in ohms, and

the third(or 4th) is the number of zeros to follow - the 'multiplier'.  
Resistances of less than 10 ohms have a 'R' to indicate the position of the decimal point.

Some examples will make this clearer:

#### Three Digit Examples

**330** is 33 ohms - *not 330 ohms*  
**221** is 220 ohms  
**683** is 68000 ohms, or 68 kohm  
**105** is 1000000 ohms, or 1 Mohm  
**8R2** is 8.2 ohms

#### Four Digit Examples

**1000** is 100 ohms - *not 1000 ohms*  
**4992** is 49900 ohms, or 49.9 kohm  
**16234** is 162000 ohms, or 162 kohm  
**0R56** or **R56** is 0.56 ohms

### SOD-123 Package Diodes

Colour-coded SOD-123 diodes. Devices marked with letter/number codes will be found in the main list.

CATHODE BAND	Devices
Red	BA620, BB620
Yellow	BA619, BB619
Green	BA585
Blue	BA582, 583, 584
White	BA512, 515, BB515, 811

### HP diode coding

HP diodes appear to follow a regular coding scheme. Although this is not always followed, it may help in identifying diodes and package styles if used with caution. Not all HP diodes follow this scheme, so beware!

The general type number scheme is: **HSMX-123#**

**HSM** stands for HP Surface Mount, I suppose!

**X** is either **S** for a Schottky diode or **P** for a PIN diode.

**#** is a letter for a SOT323 package and a number for a SOT23 device.

It denotes the internal arrangement - single, common anode pair, quad, etc. The digit of the code marked on the package itself usually corresponds to the package style (#) number. The numbers and letters correspond to the following arrangements:

Device style	# SOT-23	# SOT-323	Printed on package	Codebook base
Single diode - standard	0	B	0	C
Single diode – reverse	1	A	1	K
Dual series - standard	2	C	2	D
Dual series – reverse	2	C	2	Z
Common anode pair	3		3	A
Common cathode pair	4		4	B
Unconnected pair	5		5	S
Ring Quad	7		7	RQ
Bridge Quad	8		8	BQ
Dual Anode			A	Y
Dual Cathode			B	J

### SOD-80 Package Diodes

The SOD-80 package, also known as a MELF, is a small glass cylinder with metal ends.

### Code marked devices

Marked 2Y4 to 75Y (E24 series) BZV49 series 1W zener diodes (2.4 - 75V)

Marked C2V4 TO C75 (E24 series) BZV55 series 500mW zener diodes (2.4 - 75V)

The cathode end is indicated by a coloured band.

### Coloured band marked devices
